

EXTRA CREDIT ASSIGNMENT 3

Due: June 14, 2008 (Week 11) at 2:00pm

Points: 10

Refer to the “Rolling Ball” lab from Week 2. For this assignment, use the ball file but instead of rolling from one side to another (within the constraints of the <div> left and right boundaries), start the ball in the upper-left corner of the browser window and “roll” it in a clockwise fashion around the window. Each time the ball reaches a corner, it should change directions. The bounds should be defined by the user-defined size of the window.
